

Getting Started on an Irrigation System...

Pro Source provides the easiest online process to getting your irrigation system. Simply follow the three steps below, and we will do the rest. If at any point you have any questions, don't hesitate to contact us.

- 1) Using the attached graph, complete your scaled drawing of the area you want irrigated. Make sure that all the areas of grass / plants / shrubs, etc. are all labeled. Please make a note of any major slopes, the nearest water source, and where you would like your controller installed.
- 2) Once completed, simply email or fax the drawing and information to us, and we will take care of the rest. We will put together a quote for you at a discounted price, including everything you will need for your system.
- 3) Upon your approval, we will prepare and ship your order, and answer any questions you may have about the installation process. Your certified design will be shipped with your order to assist you in installation.

The discount you receive will remain on your account in case that you need to order addition parts.

** Our irrigation designs are certified by an IIABC (Irrigation Industry Association of British Columbia) irrigation designer. If you decide not to go ahead with the quote we provide, you may purchase the design for a charge of \$50.00. Otherwise, this fee will be waived.

We may need to contact you to ask some questions for us to be accurate on your design. For this purpose only, please write your account name & contact information on your design when submitting it.

Account Name: _____

Static Water Pressure at source, if known: _____

Water flow at source (GPM @ 60 PSI), if known: _____
